

# Handling instructions for HIREC spray

## Be sure to read before working with the product.

This product contains water repellent granules dispersed in a resin solution. The granules have a high specific gravity, so they sink to the bottom of the can. (See diagram at right.)

Important

- **Before use:**

**Shake well just before pressing the spray button.**

(Repeat when you let the can stand for longer than 10 seconds.)

- **Application technique:**

**Hold 15 to 20 cm away from the surface to be coated and apply 5 to 6 times.**

**Let dry for 2 to 3 hours after applying.**

(Never allow water to make contact during drying.)

- **After use**

**Turn the can upside down and continue pressing the spray button until the coating material flows out and gas is released.**

(The spray opening will clog up if you skip this operation and you won't be able to perform the next spraying operation.)

- **Storage**

**Never store in places where the temperature is over 40 ° C.**
